Reman Gears

Core Credit Guidelines

Core credit guidelines have never been easier or friendlier!

*TRW will pay full credit for cores which meet the following criteria:

1. Drain the core.
2. Install port plugs available from your purchased gear.
3. Clean the part number area to ensure the correct part number of your core.
4. Core must be in 'as removed' condition, AND from the same application as the gear purchased. Refer to your core group reference to confirm core eligibility.
5. Core must be fully assembled.
6. Remove all 'extra' components.

TRW will charge \$30.00 for each of the following services that must be performed on your core:

- Steering arm removal
- U-joint and/or coupling removal
- Mounting bracket and/or mounting bolt removal
- Fitting removal
- See your OEM dealer manual for return details and other specific core inspections required. Specific core inspection guidelines are included with each TRW remanufactured gear sold.

Reminder: Ship all cores with port plugs correctly installed!
