SUBJECT: Remy Inc., Program Update – New 36SI Now Available

Freightliner LLC Customer Support is pleased to introduce a new high performance 36SI model alternator to its product offering.

Design to withstand 105C inlet air temperature to meet requirements of today's hotter running engines, with an increase rated output to **165A @ 5000** alternator rpm, increase low speed (**100A @ idle**) performance, and increased efficiency over current product for better fuel economy.

Part Number	Description	PDC Reg. DNet	Direct Ship Reg. DNet	Core
DR/8600060	36SI Alternator, 165 amp. Hinge Mount.	\$408.52	\$486.90	\$0.00

The 36SI improves the performance of a truck by decreasing the jump starts, and by improving the battery life. The product is currently used in FLLC vehicles; however, it is installed in production with other truck OEMs so it's strongly recommended to keep some on stock.

In summary:

- Higher Output at Idle (1800 GRPM) - 36SI 50% more output vs. 34/35SI performance
- Higher temperature capability - 35SI & 36SI -105C inlet capable
- Improved Efficiency - 36SI 70% vs. 35SI 60% peak efficiency resulting in fuel economy savings

Remy Inc. starters and alternators are sold through the Freightliner LLC Parts Distribution Centers and the Direct Ship program. Vendor prefix is DR/.

If you have any questions, please do not hesitate to contact Parts Support.
