

Rules For Engine Repower

With the ever changing Emissions regulations customers must understand what options are available.

- When an engine is being replaced, the replacement engine (or rebuilt to) must a certified configuration that is equivalent , from an emissions standpoint, to the engine being replaced.**
- Example if you are removing a Tier 1 or 2 engine you must go back with at least the same or newer Tier rating.**
- EPA requires us to take back the old engine when a customer repowers with a new engine.**
- ReCon is offering options that will allow us to exchange with the like vintage engine or upgrade to a newer spec. Again we must get the old core back.**
